Talk and Workshop with Stephen Cartwright

Talk: “Art and Data”
March 1, 2018 | 4:10 p.m. | EWFM 520

Stephen Cartwright is an artist and self-tracker. He creates his work through the intersection of analog and digital technologies—from pencil on paper to 3D computer modeling and digital fabrication. His personally collected data includes his exact latitude, longitude and elevation for every hour since June 21, 1999 and many other data sets. From this information, Cartwright creates multi-dimensional maps and objects and offers a unique perspective of one person’s transit through life. Cartwright’s sculptural visualizations are more than just illustrations of data—they create new forms and topographies.

Workshop: “Turning Data into Art: Behind the Scenes”
March 2, 2018 | 10:00 a.m. to 12:00 p.m. | EWFM 520

Stephen Cartwright will discuss his process for turning data into art and visualization projects. This session will expand on his lecture and get into the details of using a range of software to collect, organize, draw, visualize and fabricate data based work.
