“How Do Utilities Make Money?”

Presented by
Scott Thomas, 2010 ESE Alumni
Distribution Operations Planning Supervising Engineer at PPL Corporation

Abstract: There are various factors that affect an electric bill. In a de-regulated system, electric bills are affected by transmission, distribution, and generation charges. The seminar will explain the different charges from a customer’s perspective, T&D utility’s perspective, and a generator’s perspective as well as how the PUC and PJM manage the various groups.

Bio: Scott is a graduate of the 2010 Lehigh University Energy System Engineering Institute program. He is currently employed at PPL Electric Utilities as the Distribution Control Center Planning Supervisor. He has worked in various roles including Relay Engineering Supervisor, Relay Test Engineer, and Substation Design Engineer. He has an MBA from Lehigh University and is a licensed Professional Engineer. He currently resides in Kutztown, PA with his wife and dog.
